

PROJECT ONE

Data Cleaning Activities

1. Standardization of Missing Coupon Codes

- Replaced all "null" values in the **Coupon Code** column with "**Unknown**" using the **Replace Values** function in Power Query.
- This ensured consistency in the dataset and improved the handling of missing promotional information during analysis.

2. Standardization of Price Values

- Rounded values in the **Total Price** and **Unit Price** columns to **2 decimal places** using the **Transform → Rounding → Round** feature in Power Query.
- This improved numerical consistency and ensured that monetary values were presented in a standard currency format.

3. Removal of Unnecessary Spaces

- Applied the **Transform → Format → Trim** transformation in Power Query to remove leading and trailing spaces from text fields.
- This enhanced data quality, reduced inconsistencies in text values, and improved the accuracy of filtering, grouping, and analysis operations.
